Dear Customer,

Re: Product Change notification for Harwin product.

Please be advised that there has been a product improvement change to the following item:

- Z80-290 - Extraction tool for Datamate Power/Coax cable contacts

The following improvements are being made to the design:

- The Protective cap is changing from a friction-fit plastic cap to a screw-threaded Stainless Steel cap.
- The cap and tool now include a hexagonal feature added to the outer diameter, to prevent the tool from rolling off work surfaces and getting damaged from a fall.
- The end of the cap now incorporates a small pin. This can be used to check that the 4 tangs of the tool are at the correct spacing - see the Technical Drawing for usage information.

The new design will become available as stocks of the existing design are exhausted. Additional production of the old design will not be supported once the stock is exhausted.

If you have any further questions regarding this letter, please do not hesitate to contact us.

Yours faithfully,

The Product Change Team
